SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Naeem Haq Examiner #: 78786 Date: 12/02/2005
Art Unit: 3625 Phone Number 571-272-6758 Serial Number: 09/604,472
Mail Box Location: KNX-5C04 Results Format Preferred (circle): **PAPER** ~~DISK~~ ~~E-MAIL~~

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Process for Setting and Storing Ordering Preferences and Profile Data Locally

Inventors (please provide full names): William R. Van Etten; Corey Prator

Earliest Priority Filing Date: July 7, 1999

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

Please provide an NPL search for claim 17 and an inventor's search. All references must be before the priority date as shown above.

focus search on highlighted portion.

Voluntary Results Feedback Form

➤ I am an examiner in Workgroup: Example: 3620 (optional)

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

PUBLISHER: Heldref Publications--US--<http://www.heldref.org>

...ABSTRACT: testing has no effect on the respective rates of attainment, and (c) D. Elkind's hierarchical ordering of identity and equivalence conservation is a consistent and complete but not adequate ordering. Group administration procedures were used to assess attainment of conservation of volume. Mixed results were obtained for the 1st hypothesis, although the lack of supportive results in 1 of the substudies is attributed to the high rate of attainment of conservation skills. Results support the remaining 2 hypotheses. (PsycINFO Database Record (c) 2005 APA, all rights reserved)

... paper and manual-based systems by providing an electronic solution that helps to automate corporate procurement throughout the buying and supply chains.

ProcureFlow allows corporations to electronically order all their MRO goods and services.

Desktop users will be able to conduct comparative purchasing across multiple suppliers' catalogues. With a single entry screen, they will be able to purchase goods and services, compare prices, and check inventory availability and delivery times.

The web-based user interface requires minimum end user training.

ProcureFlow also handles requisition orders, approvals, and payments; and tracks employees' purchasing pattern.

Today, most organisations' procurement processes remain paper-based, resulting in little or no control over the supply chain and...

... procurement activities and automating all critical integration between buyers and sellers.

ProcureFlow's solution increases organisational effectiveness by reducing processing and cycle times, increasing accountability, and reducing staff and inventory costs...

... during a transaction, then all updates to the other databases must
be rolled back in order to maintain synchronization.

Distributed databases implement a two-phase commit to manage this. The
first phase prepares all databases for updates. The second tells the
database to commit the transaction, physically writing the updates to
disk. This can be a slow...

...process when messages are being transmitted between remote computers. If
one of the databases is not available, then all transactions associated
with that database throughout the distributed environment grind to a halt
...

...even when one site is down. In a data replication environment, a
transaction updates a primary database first. The data is then
replicated on secondary databases, which can be local or remote...

...immediately or can be deferred to some later time. If a secondary
database server is not available because of unscheduled downtime, the
replication is automatically deferred until the server becomes available.

Replication requires the same database structure at each primary and
secondary node. Unlike distributed transactions, applications in a
replication environment cannot...

... to implementation.

The need for data preparation itself arises for the most part
because:

- * The structure of data must be changed to fit marketing
perspective. For instance, it is common to...

...in a line items file. From an analyst's viewpoint this information
should be on order records.

- * Important fields, such as source and offer codes, are missing or
incorrect, sometimes in more than 50 percent of cases.

- * Deduplication is done only on mailing records, not on the main
database.

while most of the challenges can be overcome, it often takes a
substantial reiterative effort...

...analyst is needed, but is usually obstructed by the absence of tools
that would overcome lack of programming skills.

The statistical modeling itself requires programming, although, with
luck, using a high...

... restoring customers to original carriers, without success, Cobb
said. He said One Bill Plan submitted orders directing change to Sprint
in both communities, and Cobb said he heard audiotape verification provided
by marketing company. In one case, person in "very large organization "
authorized switch, but apparently provided extension numbers that didn't
belong to customer. Cobb said TSC wasn't able to check listing since it
lacked software that could read data as it was transmitted electronically
from One Bill Plan. "we...

...a very strong no-slamming policy," he told us. TSC has suspended
processing any additional orders originated by One Bill Plan, Cobb said.
Cobb also said that "under normal circumstances" companies such as USW
would check change orders against its master database and would
eliminate any numbers that didn't match. He said USW didn't check...

...new catalog management products designed to further automate catalog management for suppliers. In the past, lack of standardization and the cost of creating multiple catalogs prevented many suppliers from adopting electronic catalog systems. However, Requisite Supplier Hub, a Web-based content platform, assists organizations and suppliers in creating, managing, and distributing online catalogs for integrated procurement and e-business strategies. Supplier Hub allows suppliers to standardize on Requisite Unifying Standard and...

...SPECIFICATION building entries in the access tables, and for dynamically allocating space for each new object- class instance, but verification checks of individual attributes are not done.

Partial downloads are supported via the same mechanism as described above with...

...511 can request individual object instances or ranges of object instances from the file server.

2.2 Database Access/Data Group Managers (DGMS)

The distributed database is step-wise expandable across multiple nodes

...

...node processing platform. Data are distributed as data groups across the public switch system in order to optimize throughput and availability

A data group is a collection of database files, where a file is mapped to an entire object class, or part of an object class as a created by partitioning an object- class as a function of primary key values. A data group is then made up of a combination of whole object classes and object class fragments. Object classes can also be replicated with a single copy appearing in any one...

... servers and other issues. Performance management or the ability to deliver acceptable response time and availability levels is key to the success of the public directory service.

In an environment with a wide-area, multivendor, heterogeneous distributed database, response time and availability can only be improved by keeping multiple copies of directory entries at different locations. The multiple copies, however, must be consistent.

Thus, CCITT and ISO have developed protocols for automatically synchronizing multiple copies of directory entries --- a technique also known as shadowing or replication. Both industry users and analysts

generally agree these techniques must be implemented soon in order to minimize remote DSA accesses and thus optimize public directory performance. This will help service providers meet users' availability expectations of a public directory.

Accounting and settlement procedures are necessary before public directories can...
